

Reference Data Management

Trusted data. Delivered.

Would you build a house starting with the roof?

We don't know about you, but we'd rather start with solid foundations.

The same applies for your Master Data Governance project. Everyone knows about the critical importance of Master Data Management, and about the need to consolidate and harmonize your Master Data in accordance with adequate governance processes. If you have a complex SAP system landscape that requires strict and consistent governance processes to ensure the highest data quality, **SAP Master Data Governance** is the right solution for your business.

But wait...

...what about the right **Reference Data foundations**, e.g. your currencies, payment terms, regions, company codes or units of measure? Are they integrated in your governance processes? Or do they represent a blind spot?

Without a solid concept around them, your Master Data Governance project may become as fragile as a card house.

Our **Reference Data Management** for SAP Master Data Governance is the answer!

Why it matters

Reference Data maintenance is critically important because of the already mentioned fundamental nature. Reference Data make up an essential part of your governance processes, and poorly maintained it can drastically affect every single business process of your company, resulting in:

- **Long and unreliable processes** in Sales, Purchasing, Logistics and Finance
- **Wrong decisions** because of reporting based on low quality data
- **Spoiled goods**, inefficient storage and other commercial risks
- **High costs** when IT systems need to be connected

If you want to make your company run as effectively and efficiently as possible, there is no way around using our SAP Master Data Governance Add-On for Reference Data Management (RDM) to improve business processes in your organization.

The Itego RDM Solution

Keep in mind that Itego RDM is, unlike other Reference Data Governance solutions, easy to install and apply. Instead of simply providing a toolkit and then leaving you alone, Itego provides all the necessary components for the implementation, including:

- Data Model
- Rule Based Workflows
- Adjustable User Interfaces
- Data Transfer for Initial Load
- Data Replication and Local Staging Area

The combination of Itego RDM with functionalities from SAP MDG results in a powerful application that will make your business run smooth & stable without having the need for long and unnecessary implementation projects.

In addition to the reference data object types, RDM offers you a broad variety of functionalities, which include:

- Preconfigured Roles
- Preconfigured Workflows
- Reference Data Search
- Language Dependent Texts
- Additional Metadata
- Local Staging Area

SAP Certified
Integration with RISE with SAP S/4HANA Cloud

Financials, HR, General Settings					
Business Area	Chart of Accounts	Company Code	Controlling Area	Customer Acc. Group	Currency
